

SafePoint
Manual retractable
safety syringe
Use instructions

Draw medication and inject into patient.

After injection, fully depress the plunger. User will feel the engagement of the needle retraction mechanism.

1 2
3 4

Hold syringe firmly at base. Pull plunger back until it clicks and locks into place and needle has retracted into the barrel.

You now snap off the plunger. The used needle will then be encased and locked inside the barrel.

5. Completion

The needle is now contained within the syringe barrel and deemed **safe**.
